KwikTag v4.6.1 Release Notes

KwikTag v4.6.1 for Web Client - Release Notes

Client Requirements

    a. Internet Explorer 7.0

Server Requirements

    a. KwikTag v4.6.1

Resolved Known Issues

Bug # ZAP-40: Date/Time shows a time stamp in the web client.

Description:
Issue occurs when a document is sent via OfficeDoks to a drawer with a date field in it. Date is converted from 'MM/DD/YYYY' format to 'YYYY-MM-DD 00:00:00' This causes a problem when editing the Filing Information, because upon saving the information you get an error that states Invalid Date. Users then must also edit the date field to remove the time stamp.

Solution:
When editing a document in the web client, a time stamp added to the date field no longer causes and error.

Bug # ZAP-39: There is a 10 character limit for numbers in the web client.

Description:
The limit on Numeric and Currency fields is 10 characters.

Solution:
Numeric fields now able to handle 20 characters, Currency fields can now handle 15 characters.
