

KwikTag 6.2 Release Notes

This document provides a summary of the enhancements and issues resolved in KwikTag v6.2

Features Added

- **Support for NAV2016 (32-bit Capture only)**
- **Enhanced FR-CA Translations**
- **Line Item Support through Data Gateway**

Issues Addressed

Platform / Server / Database Updates

- Platform: GP Sync Service (old GP Webservices) - extended timeout on writing the values to the database. This issue has been resolved.
- Data Gateway - Date Storage Format should be Uniform - when no timestamp is provided, should be 00:00:00.000 and is now working properly.
- SQL locked while tagging. This issue has been resolved.
- KwikFlow: IIS Log Files get extremely large quickly. This issue has been resolved.
- AX/NAV/SL connector login was failing on second attempt. This issue has been resolved.

NAV Updates

- Scroll bar was missing from associated documents in the user client and has been added.
- Vendor Docs now displays the most recent 500 files.
- Prompt for Settings Login issue has been resolved.

GP Updates

- No Metadata field columns were displaying in the GP Work Queue for some customers. This issue has been resolved.
- GP Connector: Timestamp should not be passed for certain fields, i.e. Document Number upon Create. This issue has been resolved.
- GP Connector: GP Work Queue - After Create, Workflow Status is no longer set to 'Entered in ERP'.

General Updates

- Approval Central - sometimes Items show for Approval in the Work Queue, but not Approval Central. This issue has been resolved.
- Some customers were unable to filter in Australian date format. This issue has been resolved.
- The command wft_tblWorkflowTrigger was adding archived documents to KTT_WorkflowDocumentQueue table. This issue has been resolved.
- Workflow Common Email Helper Vendor Name Lookup has been optimized.
- Some customers were experiencing performance issues while tagging under the Drawers tab. This issue has been resolved.
- The System Barcodes of UseSystemBarcode and SpecialDrawerInfo were not loading properly. This issue has been resolved.

General Updates - continued

- In the user client, the Distribution Modal on Edit in Approval Central did not display the Default GL Codes. This issue has been resolved.
- Drag and drop functionality issues were resolved.
- Email Input was defaulting to text body over HTML. This issue has been resolved.
- Currency formats: FR-CA GL Modal Dollars and Cents would zero out after typing and tabbing. This issue has been resolved.

System Requirements

The system requirements for KwikTag v6.2 remain the same as prior versions.

- OS: Windows Server 2008/2012
- CPU: minimum 4 cores
- Memory: minimum 8 GB of RAM
